Subject Fw: lab results for 33777 valley center road

Kristie/Eric:

Received the lab reports this morning. The contractor still owes us a summary report, but I did ask that the data be delivered to us before final reporting so we could evaluate. I have not reviewed this thoroughly yet, but do have our contractor preparing a quick report discussing the results.

Let's set up a time where we can meet and go over this information so we can determine any next steps. I can always be reached at the number below. I'll leave you a voice message as well, in case this doesn't get routed to you quickly.

Craig Benson, Federal On-Scene Coordinator
Emergency Response Section
U.S. EPA Region 9

Subject lab results for 33777 valley center road

Mr. Benson-

Here are the lab results, as we received them, for the samples taken at 33777 Valley Center Road (Marvin Donius' place). Marc has been and still is out of town. He'll be back the following Monday, but Mr. Donius asked me to forward you at least what we've received from the lab. The lab we use is in LA, but they sent out some of the tests (like the triazines and pesticides, etc.) to a sister laboratory, which is why the results took a little longer than expected. In any case, this should be all of them now. I think a chain of title is included with the main bulk of them, which may help you as far as which areas were which-

WCA samples were from the waste oil containment area (1 and 4 were the shallow samples)
AST samples were from near that large aboveground tank (odd numbers were the shallower samples)
TA samples were from the grid near where the trucks were parked (again odd numbers were shallower)

BP were ground water samples taken before we purged the well
GW were ground water samples taken after we purged the well
the AB sample was the blank -the vial of water that sat near the generator while we took the rest

of the samples

Hope that helps a little
